

The fire service rescues, extinguishes, recovers and protects, and is called out to all types of accidents, mishaps and natural disasters. Today officers-in-charge are supported by powerful software solutions to optimise procedures during operations, but normal office laptops or tablets are generally unable to cope with the conditions that prevail on site.

The Agile X from BARTEC is an extremely robust and versatile tablet PC that has been developed specifically for harsh environments and has the most extensive range of accessories on the market. It withstands impact, vibrations and even falls from a height of over one metre onto concrete, can be used within a temperature range of -20 °C to +40 °C and due to its IP 65 certification is dust-proof and water-proof. With its large, high resolution 10.1" LED display, the device offers excellent readability in all daylight conditions.

	<p>No consideration needs to be paid to the danger zone due to the Ex certification.</p> <p>The devices are alternatively available in a purely "Roughed version".</p>
---	--

DIRECTLY EN ROUTE TO THE DEPLOYMENT
Using the Agile X, the journey to the deployment location is possible without map or detailed local knowledge, saving a huge amount of time during operations. The vehicle mount ensures the device is always ready to use.*

RECOGNISE DANGER QUICKLY
Airbags and belt tensioners can injure firefighters in an emergency. Relevant information available on the Agile X enables sources of danger on modern vehicles to be detected on site. Hazardous materials data sheets can also be downloaded directly during operations.*

LIVE DOCUMENTATION
Using the Agile X, documentation of the deployment is possible on site and can be completed with images and videos. The docking station enables the Agile X to replace the PC that would otherwise be required.*

KEEPING AN EYE ON TECHNICAL EQUIPMENT
The operating times for breathing apparatus can always be seen instantly on the tablet PC. Those wearing breathing apparatus can be identified immediately and clearly by means of RFID.*

AFTER A FIRE IS BEFORE A FIRE
Agile X ensures the unambiguous detection of the material using barcode or RFID, and helps establish which material needs to be inspected or replaced. Paper lists are a thing of the past – everything is recorded in digital form.*

* "3rd party software" that supports these functions is required for application.

Accessories for Agile/Agile X

Leather carry case

Shoulder strap

4-point belt

Long-life battery
10600 mAh

2-slot
battery charging station

Radio module 4G/LTE
EU/US

Docking station

Vehicle
